

OFICINA DE LA RECTORA
UNIVERSIDAD DE CAMAGÜEY

Camagüey, October 12, 2008

Sadd, John R.
50 Encantado Loop,
Santa Fe NM 87508
USA

Dear John R. Sadd,

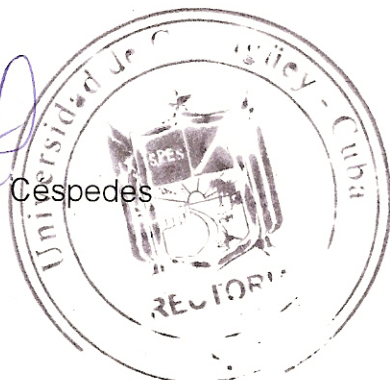

With this letter I am officially inviting you to visit the University of Camagüey to participate in the "International School in Computational Simulation and Modeling Using Agents", which will be held in the framework of the 3rd Biennial International Trans-disciplinary Seminar on Complexity, to be held 23 to 27 February, 2009. We will publish the proceedings of this conference, which will, of course, include your work if your presentation is made in person.

On this occasion, your analytic and methodological contributions to the topic of "Applied Complexity" in the solution of real-world problems using NetLogo and StarLogo will surely be stimulating and of great value to the participating scholars from Cuba, Latin America and the rest of the world. It also will be an excellent opportunity for you and your colleagues, to share and contrast experiences between the Complex Adaptive Systems approach of Santa Fe and other schools and perspectives.

We are convinced that, after the seminar, we will be mutually enriched and closer to finding better solutions to problems in such important fields of human life as public health, education, food production and distribution, catastrophe management, human social development management, and others.

With kind regards,

Dra. C. Lianet Goyas Céspedes
Rector

Carretera Circunvalación Norte Km. 5 ½ Camagüey
